

3. What is Computer Hardware? Definition plus 20 Examples

Answer the three questions below *in English* :

- 1. How does the article define hardware?** Physical components of PC
- 2. How does the article define software?** Written instructions that tell what to do
- 3. How can hardware components be categorized? How are these categories defined?** Internal (installed inside the PC) and external (connected outside of the PC)
- 4. Be prepared to provide a short definition/description of the 20 items of computer hardware mentioned in the article**

Peripheral (device)	
Power supply [= source of energy]	Convert AC to DC, prevent overheating issues
Video card	(graphic card) send output images to video display device
Optical disk drive [= ODD]	Use laser light/electromagnetic waves to read/write on optical discs
Card reader	Reads data from memory cards
Speaker	Output device used for listening to audio
External hard drive	Connects with usb port, its portable, allows to share data between computers
Image scanner	Transfer images or text to a computer
Projector	Enable a roomful of people to view visuals generated by a computer
Joystick [= control lever]	Use to play at video games or to control real life vehicles
headphones	For listen to audio
(USB) flash drive [= memory device]	Portable data storage device
Flash memory	Memory that keeps data
Printed circuit board	Board that holds components
To house	To contain inside
To operate [<i>intransitif</i>]	To work
To operate [<i>transitif</i>]	To use a device
Hub [= centre of activity]	Central connection point
To enable	To make possible
To process	To handle data
Clock speed	Speed of the processor
Alternating current	Current that change direction

outlet	Wall power socket
Direct current	Current with one direction
Overheating issues	Problems from too much heat
“Working memory”	Short-term computer memory
Storage device	Device that keeps data
Volatile memory [/'vɒlətaɪl/]	Memory that loses data
Non(-)volatile memory	Memory that keeps data
To power off	To turn off
To power up	To turn on
Graphics card [<i>attention -s !</i>]	Device that creates images
Expansion card	Card that adds functions
Display device	Device that shows images
Output image	Image produced
Slot	Place where you insert something
Moving part	Part that moves
To access sthg	To reach or use something
Optical disk	Disk read with light
Built-in	Made inside the device
Memory card	Small card for storage
Memory card reader	Device that reads memory cards
To read data	To get information
Hardware device	Physical computer part
Video display	Screen that shows video
To press a button/key	To push a button
Pointing device	Device to control pointer
Optical sensor	Sensor that uses light
Left-click	To left click on smth
To left-click (on) sthg	Click with the left button
Right-click	Click with the right button
To right-click (on) sthg	To right click on smth
Scroll(ing) wheel	wheel to move up/down
Input / Output device	Device for in/out data
Hard copy (= physical copy of data)	Printed paper copy
Inkjet printer	Printer using ink drops
Laser(jet) printer	Printer using a laser
USB port (= hole for connector)	Hole for USB devices

Subwoofer	Speaker for deep bass
Data cable	Cable that carries data
Optical technology	Technology using light
To edit sthg	To change something
Still / mobile image	Non-moving/moving image
HDMI port	Port for video and audio
