

## 7. Ten Examples of Storage Devices for Digital Data

Answer the questions below *in English* :

1. How does the article define/describe digital data storage? Record of digital information
2. The article describes some of the uses of digital data storage. What are they? To rely upon information to function, to store media, to transfer information
3. How many categories of digital storage devices are there and what are they? Magnetic storage, optical storage, flash memory, paper storage
4. Be prepared to provide a short definition/description of the 10 digital data storage devices mentioned in the article
  - **Hard Drive Disks** -> stores files, programs, and documents on fast-spinning magnetic disks in computers
  - **Floppy Disks** -> old storage device that uses magnetic disks to save information
  - **Tapes** -> old, cheap storage using magnetized plastic tape; now mostly unused
  - **Compact Discs (CDs)** -> optical storage using lasers to read/write data, first for music, later for computers
  - **DVD and Blu-ray Discs** -> optical discs with much more storage than CDs; Blu-ray can hold 25–50 GB
  - **USB Flash Drives** -> small, fast, and durable storage device using flash memory and a USB connection
  - **Secure Digital Cards (SD Cards)** -> small memory card used in cameras and phones, designed to fit only one way
  - **Solid-State Drives (SSDs)** -> fast, reliable, and quiet storage using flash memory instead of a hard drive
  - **Cloud Storage** -> online storage on remote servers accessed via the internet
  - **Punch Cards** -> old paper cards with holes used to store data on early computers
5. The article describes six common causes of digital data loss. Name them and describe them.
  - **Accidental deletions** – deleting or reformatting files.
  - **Power failures** – sudden loss or surge of electricity.
  - **Physical accidents** – spills, drops, or damage to devices.
  - **Viruses & malware** – corruption from malicious software.
  - **Theft** – losing the device and its data.
  - **Disasters** – fires, floods, explosions destroying data.
